ZXCHESS

TWO GREAT ZX81 16K CHESS GAMES ZXCHESS (ENHANCED)

- Written totally in machine code.
- Full graphic display of Chess board.
- Six levels of play: Two play within competition time limits.
- Option to play Black or White.
- Plays all legal moves including castling and en-passant.
- Cassette routines for saving unfinished game and returning to later.
- Displays moves of game on screen or printer for analysis.
- Print a copy of the Chess board onto the printer.
- Board can be set up in any position, you can even swap sides midgame.
- Clear whole board with one command: for end game analysis.

£6.50

ZXCHESS II We believe the strongest ZX81 Chess game as no other has beaten it!!

- All the features of ZXCHESS plus:
- Book of 32 opening moves.
- Seven levels of difficulty: FOUR play within competition time limits.
- A move is suggested by the ZX81 if wanted.
- Optional Full Graphic version using the Q5 CHR5 Board.

£9.95

2 copies supplied on cassette with full instructions.
Cheques and postal orders payable to:

ZX CHESS & ADVENTURES PROGRAMS FOR THE ZX81/80 INCLUDING -

ZX-FORTH

Full implementation of Forth on ZX. No longer held down by slow BASIC. Forth is 10-20 times faster. "Simplicity of Basic with the speed of Machine Code"

16K BYTE RAM PACKS

£31.95

"BYG BYTE" Ram packs, no wobble problems, 1 year guarantee. Simply the best you can buy. Immediate delivery.

1K ZX CHESS!

£2.95

We didn't think it was possible but this game plays against you, two opening moves. Needs 1K of memory to run. Incredible!

ADVENTURES

ADVENTURE 'A'

£6.00

ADVENTURE 'B'

£7.00

ADVENTURE 'C'

£8.00

Exciting machine code games with instant response, choose from the range below. You find yourself stranded on an alien planet. Can you reach your ship and escape?

In a jungle clearing you come across an Inca temple. You must break in, collect treasure and escape alive. Beware. Includes a cassette save routine.

You are unfortunate enough to be drawn to an alien cruiser. Can you reach the control room and free yourself or will they get you first? Includes a cassette save routine.

GALAXIANS £9.95

All the features of the arcade game in a fast machine code program.

Swooping attackers, explosions and personalised scoring.

ZXBUG £7.00

A 30 in 1 machine code tool and disassembler, allows access to registers and search through and modify memory, with cassette routines.

MICHAEL ORWIN'S ZX81 CASSETTES

QUOTES

"Michael Orwin's £5 Cassette Two is very good value. It contains 10 stolid well designed games which work, offer plenty of variety and choice, and are fun."

from the ZX Software review
in Your Computer, May '82 issue.

"I had your Invaders-React cassette... I was delighted with this first cassette."

P. Rubythorn, London NW10

"I have been intending to write to you for some days to say how much I enjoy the games on 'Cassette One' which you supplied me with earlier this month."

E. H. London SW4

"... I previously bought your Cassette One and consider it to be good value for money!"

Richard Ross-Langley,
Managing Director,
Mine of Information Ltd.

CASSETTE 1

(eleven 1k programs)

machine code:
React, Invaders, Phantom aliens, Maze of death,
Planet lander, Bouncing letters, Bug splat.
Basic:
IChing, Mastermind, Robots, Basic Hangman,
PLUS Large screen versions of Invaders and
Maze of Death, ready for when you get 16k.
Cassette 1 costs £3.80

CASSETTE 2

Ten games in Basic for 16k ZX81

Cassette Two contains Reversi, Awari, Laser Bases, Word Mastermind, Rectangles, Crash, Roulette, Pontoon, Penny Shoot and Gun Command.
Cassette 2 costs £5.

CASSETTE 3

8 programs for 16k ZX81

STARSHIP TROJAN

Repair your Starship before disaster strikes. Hazards include asphyxiation, radiation, escaped biological specimens and plunging into a Supernova.

STARTREK This version of the well known space adventure game features variable Klingon mobility, and graphic photo torpedo tracking.

PRINCESS OF KRAAL

An adventure game.

BATTLE Strategy game for 1 to 4 players.
KALABRIASZ World's silliest card game, full of pointless complicated rules.

CUBE Rubik Cube simulator, with lots of functions including 'Backstep'.

SECRET MESSAGES This message coding program is very top class.

MARTIAN CRICKET A simple but addictive game (totally unlike Earth cricket) in machine code. The speed is variable, and its top speed is very fast.

Cassette 3 costs £5.

CASSETTE 4

7 games for 16k

ZX-SCRAMBLE (machine code)

Bomb and shoot your way through the fortified caves.

GUNFIGHT

(machine code)

INVADERS

(machine code)

GALAXY INVADERS (machine code)

Fleets of swooping and diving alien craft.

SNAKEBITE (machine code)

Eat the snake before it eats you. Variable speed (very fast at top speed)

LIFE (machine code)

A ZX81 version of the well known game.

30 TIC-TAC-TOE (Basic)

Played on a 4x4x4 board, this is a game for the brain. It is very hard to beat the computer at it. 6 of the 7 games are in machine code, because this is much faster than Basic. (Some of these games were previously available from J. Steadman).

Cassette 4 costs £5.

Recorded on quality cassettes, sent by first class post, from:
Michael Orwin, 26 Brownlow Rd., Willesden, London NW10 9QL (mail order only please)

The most attractive feature of the newly announced ZX Spectrum is its price.

At the rock bottom cost of £125 for the basic system it means many people will be able to afford a personal computer system providing plenty of memory, comprehensive colour graphics and sounds facilities.

Sinclair Research has managed to produce a micro-computer with 16K RAM memory space aimed at both first time users and those with a basic knowledge and understanding of computers and programming for use in leisure, business and education. By the end of May the first batch of Spectrum computers should have reached the public.

The Spectrum has been brought out to compete directly with the BBC Microcomputer and although it is a fraction of the size of the BBC machine in some respects it equals the BBC Microcomputer in performance.

The main advantage the BBC Microcomputer has over the Spectrum is the keyboard. Whereas the BBC computer has a full size typewriter style keyboard, the Spectrum has an inferior calculator push-button style keypad. An improvement over the ZX81 but still not for us typists.

It is not as easy to use because the buttons are small and to perform some operations you have to use a number of keys instead of one or two, prolonging the process. Despite this, Sinclair Research says it does not detract from the computer's capabilities.

Based around the Z80A microprocessor the Spectrum incorporates a 16K ROM containing the operating system, the BASIC interpreter, character set and monitor, (which checks that the computer operations are performed correctly).

A 48K RAM version is available for £175 although an internal expansion board is scheduled for release later in the year, which will upgrade the 16K Spectrum to 48K.

It can handle 52 user-definable functions, 16 graphics characters, 20

colour control codes and 21 user definable graphics characters.

These graphic characters are high resolution and are memory mapped into the RAM. There are eight colours available, black, red, blue, magenta, cyan, green, yellow and white and you have the option of using normal or extra brightness and flashing or steady mode. But it is difficult to tell the difference. You can use the colours both for graphic definitions and screen borders. The colour on the computer distorts the graphic characters and this cannot be avoided. On screen the Spectrum can cope with 24 32 character lines of text with the option of using the bottom two lines for editing and checking your programs.

This new machine is designed to be easy to use and comes with an introductory instruction booklet to the world of computers. ZX81 BASIC is a subset of ZX Spectrum BASIC and incorporates the standard features of string handling, single stroke keyword entry, editing facilities and additional features including a sound command, colour control commands, a checking facility and a merge command allowing you to combine programs in the computer's memory with those on cassette.

The Spectrum's sound output facility leaves a lot to be desired. Sounds can only be emitted from a "loud" speaker on the Spectrum and cannot be put through a television as in the BBC Microcomputer's case. An alternative is to link the system up to your hi-fi amplifiers and transmit via those. Another drawback for games players is the exclusion of a socket to connect joysticks.

Because the two BASICS are similar it is easy to convert existing ZX81 software for use on the Spectrum.

Loading software is done via a cassette recorder or the newly developed Sinclair Microdrive three inch disc drive units which will be released at the end of the year selling for about £50 each.

Z-XTRA

Welcome to Z-Xtra the first Computer & Video Games' Sinclair supplement rushed out in response to the launching of the ZX Spectrum.

The Sinclair range causes us some problems in providing for every category of owner. Those of you who are still proud owners of a ZX80, those have not yet managed to add any extra memory to your '81 and those who are only too eager to use up all the spare capacity of the RAM pack.

In Z-Xtra we present four listings which should keep just about every Sinclair user happy. These include the arcade-speed Microvaders which is our first experiment in printing machine code listings. Let us know if you approve of the practice.

Although orders are flooding in for the new colour Spectrum computer. Naturally most Sinclair owners will have an interest in the product so we have taken this opportunity of telling you a little about the machine's capabilities (left side of the page). We hope that this supplement helps you gain a little Xtra from whichever Sinclair machine you own.

ZX99 AUTOMATIC TAPE CONTROL

The logical extension for the Sinclair ZX81 giving data retrieval & word processing £59.95 plus P & P

The ZX99 Tape Control system is a sophisticated extension to the Sinclair ZX81 Microcomputer, providing remarkable additional capabilities, which allow both the beginner and expert access to a professional computing system without the expected expense.

* DATA PROCESSING

The ZX99 gives you full software control of up to four tape decks (two for reading and two for writing) allowing merging of data files to update and modify them. This is achieved by using the remote sockets of the tape decks to control their motors as commanded by a program.

* PRINTER INTERFACE

The ZX99 has a RS232C interface allowing you direct connection with any such serial printer using the industry standard ASCII character code (you can now print on plain paper in upper and lower case and up to 132 characters per line.)

* MANY SPECIAL FEATURES

There are so many different features that it is difficult to list them all:

For example:

AUTOMATIC TAPE TO TAPE COPY: You can copy any data file regardless of your memory capacity (a C90 has approx 280K bytes on it) as it is loaded through the Sinclair block by block.

TAPE BLOCK SKIP without destroying the contents of memory.

DIAGNOSTIC INFORMATION to assist in achieving the best recording settings.

* TAPE DRIVES

We supply (and guarantee its compatibility) a Tape Drive that works with your computer.

* COMPUTER CASSETTES

We supply quality (screw assembled) computer cassettes. Please enquire for any not shown:

The ZX99 contains its own 2K ROM which acts as an extension to the firmware already resident in your ZX81's own ROM. The ZX99's ROM contains the tape operating system, whose functions are accessed via Basic USR function calls. Each function has an entry address which must be quoted after the USR keyword. All of the functions can be used in program statements, or in immediate commands (i.e. both statements with line numbers and commands without them).

There is an extension board on the rear to plug in your RAM pack (larger than 16K if required). The unit is supplied with one special cassette lead, more are available at £1 each (see below).

COMPREHENSIVE USER MANUAL INCLUDED IN PRICE

* ZX99 SOFTWARE *

We now have available "Editor-99", a quality word processing program including mail-merge, supplied on cassette for £9.95.

Also, following soon will be:

- * Stock Control
- * Sales Ledger
- * Business Accounts
- * Order Processing
- * Debtors Ledger
- * Tax Accounting

HARD TIMES

A thriving peripheral market, currently standing at over 120 companies, has sprouted around the Sinclair ZX81. It can be confusing for beginners but Robin Bradbeer shows how to expand your Sinclair logically.

Memory expansion should be compulsory for the ZX81 as it is impossible to do anything serious without it.

Expansion packs come in all shapes and sizes, ranging from those that have just 3K of extra memory to those that can hold 64K or more. The ZX81 as it comes from Sinclair is capable of taking another 16K without any trouble. Anything above that requires some software and hardware techniques so that the extra memory can be accommodated.

The Sinclair RAM pack did have some problems when it was first introduced. They were mainly due to contact and support problems associated with the RAM pack moulding. These have now been overcome and most packs are quite reliable. However the odd story one does still get through. One of the more popular alternatives is made by Caps and is called the Byg Byte.

The Byg Byte is about four times the size of the Sinclair pack, and at £34.95 £5 more expensive. This extra volume and mass does mean that the whole package sits more securely on the back of the ZX81. There is also an indicator to tell you that things are working OK. Having used the Byg Byte for a number of weeks it certainly seems a more reliable and sturdier expansion unit than the Sinclair original.

The next item that becomes useful to the serious user is a proper keyboard.

Most keyboards are connected to the main printed circuit board of the ZX81. This means that the casing must be unscrewed. This is done by removing a couple of the rubber feet to

get at two of the screws that hold the case together. The Sinclair keyboard is connected to the main board by flexible strips of printed wiring. These are actually part of the keyboard itself. All the large keyboards on the market fix into the sockets that take these flexible leads. Most can also be used externally with the case reassembled. For a permanent fixture it is possible to use multiway cable that can be soldered to the keyboard and the pcb. This does involve some quite tedious and complicated desoldering and is not recommended to the novice.

Two keyboards that work very well come from Computer Keyboards and Kayde Electronic Systems. Both cost £27.95 and have moulded tops to the keys that have the keywords printed on them. The Computer Keyboards unit has six extra keys that can be used to control other things, such as an electronic circuit to turn the tape recorder motor on or off remotely, or even to fix some sort of repeat key or shift lock. The Kayde unit does have a case which costs £10.95, and also comes with a repeat key.

Instead of having a

keyboard hanging onto the ZX81 by a flexible cable it is clearly desirable to put the whole lot into a single box. Most electrical suppliers, like Vero, have a whole range of boxes ranging from around £9, up to quite expensive and well made units costing £30 or more.

If a ready made case is purchased then it should have fixing holes and mounts for the Sinclair board. Unfortunately cases purchased from most general suppliers do not have these and therefore some experience in mounting pcbs and the taking into account such factors as what to do about the very hot heat sink that sits just under the ZX81 keyboard.

Fuller Micro Systems provides a built keyboard and case which can include an expanded keyboard and costs £39.95 or £33.95 in kit form. Easy to assemble and a reliable system.

The next addition to the system will be a decent printer. The ZX printer, although cheap, is not capable of producing copy that can be used for letters, notes etc. If a normal printer is going to be attached to the system then an interface is required to change the

signals coming out of the back of the ZX81 into those that can be understood by that printer. Most printers use a standard interface called RS232C.

One of the newest, and most flexible, interfaces has been produced by Capital Computers. This interface not only has RS232C i/o but also a parallel output to the other common printer standard called Centronics Parallel. This allows the system to be connected to a whole host of things including not only printers but also modems for connecting to the telephone network, but also other computers.

The use of an EPROM with the conversion routines inside means that any other non standard interfaces can be accommodated quite easily. The motherboard to take the i/o interface costs £14.50, or £34.95 depending on the number of slots required, and the i/o board costs £39.95.

Now your system has cost around £250 - approaching the price of a computer which was designed to cope with all these tasks from its conception. But the beauty of expanding this way is that you can pace it to suit your pocket.

SOFT CELL

CENTIPEDE

The centipede's contorted run through its mushroom patch set whole new tactical problems to the trigger-happy arcade players when it appeared as a video game.

This Sinclair ZX81 version has lost some of the creatures which feature in the arcade version but still remains an addictive and frustrating game.

The instructions are well displayed at the beginning of the game, and easy to read. It can get a little monotonous going through these before every game, but this is the only slightly dirty mark against an otherwise excellent game.

As in the arcade version, a centipede meanders across the screen and moves down one line when it hits an obstacle or the side of the playing area. The players task is to fire missiles at the centipede and destroy it before it reaches you bases at the bottom of the screen.

Easy? Well it would be if the centipede didn't split in two every time it gets hit. Unfortunately it does. The player can decide at the start as to how many obstacles he puts on the screen, and obviously the more obstacles there are, the faster the centipede goes.

Anyone who beats the game with the obstacles

rating set at 20 deserves a creepy-crawly medallion. I found it quite impossible as it takes about five seconds at this speed to reach the bottom of the screen!

A very professional game and well worth the £4.95 it costs. Centipede is available from DK Tronics of Great Yarmouth.

ASTERIODS

You blast asteroids by numbers in Quicksilver's version of the arcade game.

The spaceship fighting its way through the rocks is represented by the numbers one to seven. Each number corresponds to a firing direction so that you can either aim your shots carefully at any oncoming asteroid, or keep the base spinning - picking off and splitting up rocks haphazardly.

The asteroids themselves are shown on the screen as white squares. These are the smaller rocks, while the larger clusters are randomly shaped blocks. When you score a direct hit on a large asteroid it breaks up into numerous smaller ones.

Although this 16K ZX81 version does not match up to the arcade game graphically Quicksilver's attempt to emulate it is very good. It is written in machine code so the asteroid

storm is lightning quick.

As the game progresses the rocks fall faster and more furiously and in more profusion. Points are scored for each asteroid you hit, with bonus points awarded when you blast a large rock.

I found it ranged between 50 and 700. When you blow up one of these the game stops momentarily the number of bonus points is displayed.

You get three spaceships to play with and a bonus ship is given if you score 10,000 points.

This addictive game is certainly worth spending £5.50 on. It occupies 4K RAM and 8K ROM.

FOOTBALL

If you think you can follow in the footsteps of John Toshack or Graham Taylor then Football Manager is the game to test out your theories on.

Running on a Sinclair ZX81 in 16K, this Addictive Games package has a shortened Football League of just 32 teams with eight in each division.

You choose which team to manage - hoping that your favourite will be among the 32 on offer - whichever team you choose will start life in division four. You must also select a skill level, there are seven, ranging

from Beginner to Genius.

The computer generates a small squad of players, either defenders, attackers or midfield men with a rating for each and an energy level.

Managers are given the option of strengthening their squad by buying players who come on the market. He can also sell players who he thinks are surplus to the squad's requirements.

Ground rent and wage bills must be met each week and these increase as the team goes higher up the league but if you are winning or playing well in cup matches you can meet these with the good crowds you can attract.

Matches are played by looking at the energy levels, morale and defence, attack and midfield ratings of the two opposing sides.

I came to review this game fresh from writing C&VG's World Cup Manager and was expecting a little more. Football fans will enjoy it and the game is good as far as it goes but I would have welcomed the opportunity of having more decisions. And it is not idiot-proof. This idiot managed to crash it as United were well on their way to promotion.

It comes with an instruction book and a save game feature from Milton Keynes-based Addictive Games and costs £7.95.

BY PAT NORRIS OF MICROX.

RUNS IN 16K

MICROVADERS

Space Invaders was the name behind the computer game craze and has since appeared in many forms on the Sinclair ZX81.

Here we produce a fast machine-code version, written by the Microx software company for you to key-in to your ZX81.

We have steered clear of

machine code listings in the past as they look rather forbidding to type in. But we felt you should be given the opportunity to try them out and let us know your reaction.

Instructions are included in the listing but a few tips on play will not go amiss. The base starts at the bottom left

of the screen in a very vulnerable position, so the first requirement is to get out of the way of the missiles quickly.

Try to wipe out those invaders on the left of the screen as soon as possible because, if a life is lost, the base appears right under this column.

The shields do not last long. hits on the saucers will boost your score but on level 1 — the highest — time runs out very quickly.

Only three lives to play with, so good luck.

Microvaders is available in cassette form from Microx at 52, The Strand, Worthing, Sussex — price £5.95.

Explore the Excellence of your ZX81

With MEMOTECH Add-Ons
High Resolution Graphics

Unique 3 month trade-in offer!

For your future needs, we'll allow you £10 against your purchase of our 64K model if:

you return your 16K pack within 3 months of receipt;

you supply evidence of purchase; your 16K model is received by us undamaged and unopened.

*We reserve the right to reject, for discounting purposes, units which have been either opened or damaged in any way.

MEMOTECH
ADD-ON
£52
plus
VAT

- Fully programmable high resolution (192 x 248 pixels).
- Video page is both memory and bit mapped.
- Video page can be located anywhere in the RAM.
- The number of video pages is limited only by your RAM size (each page occupies about 6.5K RAM) and pages can overlap.
- Instant inverse video.
- Switching inverse video on and off gives flashing characters/numerals etc.
- Video pages can be superimposed by software switching.
- Access to video page is similar to plot and unplot commands in BASIC.

The pack comes in an elegant aluminium case, anodised black and styled to fit onto the back of the ZX81, allowing more add-ons (Memopak RAM, Sinclair printer, etc) to be connected without a further power supply. It contains a 2K EPROM monitor, holding a full range of graphics subroutines which can be called by the BASIC USR function or by machine code.

MEMOTECH
ADD-ON
£26

Memopak 16K Memory Extension

It is a fact that the ZX81 has revolutionised home computing and coupled with the new Memopak 16K it gives you a massive 16K of Directly Addressable RAM, which is neither switched nor paged. With the addition of the Memopak 16K your ZX81's enlarged memory capacity will enable it to execute longer and more sophisticated programs, and to hold an extended database.

The 16K and 64K Memopaks come in attractive custom-designed and engineered cases which fit snugly on to the back of the ZX81 giving firm, wobble-free connections.

MEMOTECH
ADD-ON
£68
plus
VAT

Memopak 64K Memory Extension

The 64K Memopak is a pack which extends the memory of the ZX81 by a further 56K, and together with the ZX81 gives a full 64K, which is neither switched nor paged, and is directly addressable. The unit is user transparent and accepts BASIC commands such as 10 DIM A(9000).

BREAKDOWN OF MEMORY AREAS

0-8K ... Sinclair ROM 8-16K ... This section of memory switches in or out in 4K blocks to leave space for memory mapping, holds its contents during cassette loads, allows communication between programmes, and can be used to run assembly language routines. 16-32K ... This area can be used for BASIC programmes and assembly language routines. 32-64K ... 32K of RAM memory for BASIC variables and large arrays. With the Memopak 64K extension the ZX81 is transformed into a powerful computer, suitable for business, leisure and educational use, at a fraction of the cost of comparable systems.

Coming Soon...

A complete range of ZX81 plug-in peripherals
Centronics Interface & Software Drivers
Digitising Tablet RS232 Interface

RUNS IN 1K

BY DAVID HEALEY

STARGATES

A series of stargates block your escape route from the holocaust resulting from the sun turning to super nova.

Time ticks by before the blazing explosion occurs during which you must navigate as many of your ships as possible to escape the solar system.

When the ships pass through each stargate they can be propelled into warp

drive and are then freed from the surrounding destruction.

The space ship is centered at the bottom of the screen with the first stargate positioned just above it. Using the inkeys you must guide your precious ship through it. Once successfully navigated a second ship appears for you to negotiate.

If your piloting prowess is good you will eventually warp your way through all the stargates that appear on the screen. Only when you have cleared one gate will the next one materialise on the screen.

Key I moves your ship vertically upwards. Key Q enables you to fly your ship left, and key P gives you movement to the right.

Star Gates fits into 1K of memory and runs on a Sinclair ZX81. If your 81 has additional memory space you can add titles.

Instructions and a scoring system. More complex scenery can be added and you can achieve a space like background by reversing the colours with inverse video. It was written by David Healey.

BARGAIN BYTES

ZX81 — EIGHT 16K GAMES FOR £5

CASSETTE ONE (CV11)

Features a full, user friendly BANK ACCOUNT, the exciting UNDERGROUND ADVENTURE, a LOAN CALCULATOR, HANGMAN — with a full library and graphics, CODEBREAKER, to test your powers of observation and logic, plus FOREIGN CURRENCY CONVERTER — see how much your money's worth! DEPTHCHARGE, can sink the enemy submarine before it blows you sky high! And finally, can you successfully battle against Captain Bloodthirsty's pirates in DEEP SEA ADVENTURE?

ALL EIGHT PROGRAMS FOR JUST £5 — A GENUINE BARGAIN!

CASSETTE TWO (CV12)

Features STOCK MARKET GAME — can you make a Million? JACKPOT FRUIT MACHINE — complete with holds, nudges and counter, NOUGHTS AND CROSSES — on three levels — easy to impossible! FINANCIAL MODEL helps you make a profit, QUIZ CHARGE — can you manoeuvre attacking submarines whilst trying to destroy them with your depthcharge?

THESE ARE NO CATCH! ALL EIGHT PROGRAMS FOR £5 — BUY NOW!

***** ORDER BOTH GET £1 OFF ***** BBC MICRO (VERSION A OR B) — FOUR GREAT GAMES ONLY £6

GAME PACK ONE (CV18)

Features JACKPOT FRUIT MACHINE with holds and nudges, HANGMAN complete with graphics and sound, CODEBREAKER tests your skills and powers of logic, DEPTHCHARGE — can you manoeuvre attacking submarines whilst trying to destroy them with your depthcharge?

ZX81 GAMES

from
J.K. GREYE SOFTWARE
THE NEW GENERATION SOFTWARE HOUSE

*Without question the finest machine code games available today!..... J.N. ROWLAND Product Manager for W.H. SMITH.

GAMESTAPE 1 for 1K only £3.96
10 Games incl. ASTEROIDS, UFO, CODE, BOMBER, GULLITONE, KALEIDOSCOPE, etc.
PROBABLY THE BEST VALUE 1K TAPE AVAILABLE.

We've done in 1k games which some of our competitors required 16k to do!

GAMESTAPE 2 for 1K only £3.96
*STARFIGHTER Super machine code Space Battle. Set against a background of twinkling stars, with stunning explosions — if you can hit the enemy!
*PYRAMID Can you move the Pyramid? Make a mistake and it will collapse!
*ARTIST The ultimate Graphic Designers aid. 8 Directions, 10 Memories, SAVE, COPY, RUBOUT, C.L.S., etc.

GAMESTAPE 3 for 1K only £3.96
*CATACOMBS A Multi-Level Graphics Adventure. Each level can contain up to 9 Rooms, 8 Passages, 7 Monsters, Food, Gold, Traps, Platforms, an Exit to the next level, and there's an infinite number of levels.
NOTE: This is NOT one of the necessarily limited test adventures as sold elsewhere.
*An excellent addictive game which will keep you amused for hours..... COMPUTER 8 VIDEO GAMES.

GAMESTAPE 4 for 1K only £3.96
*3D MONSTER MAZE The Game to Top All Others. Unbelievable Graphics! Can you find your way through the Maze? The EXIT is there somewhere, but then so is a T.REX, and its after YOU! All in 3D (the T.REX will actually run towards you in full perspective), you've never seen anything like this before!
*3D MONSTER MAZE is the best game I have seen for the ZX81! COMPUTER 8 VIDEO GAMES.

*If I had to choose just one programme to impress an audience with the capabilities of the ZX81, then J.K. Greys 3D MONSTER MAZE would be the one without doubt!..... ZX COMPUTING.

GAMESTAPE 6 for 1K only £4.96
*3D DEFENDER The Ultimate Space Game. Super fast Machine Code 3D version of the Arcade favourite. You have to save your home planet from the marauding Alien Spacecraft. This is all in 3D, your viewpoint shows you the view out of your fighters cockpit window. The backdrop moves when you turn, or fly up or down (8 flight directions), just as if you were really flying it! But then YOU ARE! The Enemy Saucers will actually zoom towards you in 3D, and shoot you if you let them! Your display includes Score, Shield Strength, Altitude, Proximity, Forward Radar and your viewpoint, which shows your rotating home planet, backdrop of 128x, Meteors, Explosions, Plasma Blasts, your Photon Beams, up to 4 Enemy Saucers and of course its all in full 3D!
*A SMASH HIT at the ZX Microfair! Most of the other software houses wanted a copy, a game not to be missed!

GAMESTAPE 8 for 1K only £1.95
*BREAKOUT Super Fast Full Screen Display Game. Your all time favourite with an added twist. See how much Money you can win and watch the pounds convert to Dollars. All in Machine Code for Fast Action with 3 Speeds, 2 Bat Sizes and three angles of rebound! The best BREAKOUT around and at this price you can't go wrong!

GAMES MARKED * INCL. MACHINE CODE.

Here's a ZX game for all you card sharps out there. Pontoon was written for a ZX80 and runs in 1K - although it does work better in more according to the author.

To twist all you have to do is press New line. To stick just press any key then New line. To burn - when asked - press New line. If you draw an ace, key in the value you want - 1 or 11. When you want another go simply press New line.

TOWERS OF HANOI

A brain teasing puzzle is posed for you to try and solve bound to make you feel fraught and frustrated.

This is a version of an old game concept, the Towers of Hanoi which is thought to have first been played by the ancient Pharaohs of Egypt. Some people believe it originated in the Indian town Benares, but most people think Hanoi was the true place of origin.

The Towers of Hanoi is a strategy game requiring an agile mind and the power to concentrate. It's association

with Hanoi is that a secret brotherhood of monks play the game in its traditional form to this day.

On the floor of their temple are positioned three vertical rods set in a brass plate. Sixty-four gold discs are put on the left-hand rod but each disc is a different size, the bottom one being the largest and the topmost the smallest.

As part of the monks' mental exercise they must move all the discs from the left-hand rod to the right-hand rod. The snag is they

can only move one disc at a time and according to the rule they cannot place a large disc on top of a smaller one.

In order to achieve the correct sequence they have to use the middle rod. The computerised version is played on a much smaller scale, in this particular one there are eight discs in total for you to use. The fewer you play with the easier the game.

Keeping count of your number of moves is the computer and it will also let

you know if you make an illegal move by placing a big counter over a small one.

To move a disc you have to specify which rod number you want to place the counter on, one, two or three. It will, as if by magic, automatically transfer to the rod of your choice.

If you get too bogged down in the calculations let the computer take the strain. There is an option allowing the computer to take over.

You will need a 16K RAM pack to play the Towers of Hanoi as well as your ZX81.

ZX HARDWARE

PROFESSIONAL 40 KEY KEYBOARD

- All legends and graphics in 2 colours
- No soldering to ZX81, just plug in
- Proper typewriter keys
- RAM/Printer compatible.

Kit £19.95 Built £24.95 Case £10.20 Repeat key add on TBA.

Range of in/out ports, music boards, motherboards, D to A converter boards, write for catalogue.

23 Way double sided, gold female edge connector, wirewrap type £2.95

Male connector £1.25

Ribbon cable £1.40 per metre

Mastering Machine code book £5.50

Programming for real applications £6.50

Tape for real applications £11.25

HARRIS & LOCKYER ASSOCIATES

FULLER FD SYSTEM £39.95

Professional Keyboard & Case for Sinclair ZX81 & ZX Spectrum

The ZX81 fits inside

The tough ABS injection moulded plastic case measures 8" x 14" x 2 1/2" and hooks up to your ZX printed circuit board in minutes. No technical know how or soldering is required.

KEYBOARD LAYOUT

All the Sinclair ZX81 keys are duplicated on our layout, with extra shift and new line keys. The professional momentary action key switches have a guaranteed life of 10 operations. The unit is fully built tested and comes complete with a money back guarantee.

INSTALLATION

Simply unscrew the ZX printed circuit board from its case and screw it into the FD Case.

MOTHERBOARD

We also manufacture a mother board which allows expansion to the ZX memory and I/O facilities within the case as well as our power supply unit and reset switch.

AD Code **VG**

	Price £	Qty	Amount
Fuller FD System 42 Keyboard & case	39.95		
FD System Motherboard	15.95		
FD 16K Memory Module	29.95		
FD 64K Memory Module	78.95		
FD PSU 9 Volts at 2 amp	12.95		
FD Shipping and Handling	2.50		

Mail to **FULLER MICRO SYSTEMS**.

The ZX Centre, Sweeting Street, Liverpool 2, England, U.K.
